

Detection Engineering Lab Architecture

1. Microsoft Sentinel: All endpoint logs must be ingested into Microsoft Sentinel using the designated Log Analytics Workspace.
2. Sysmon Configuration: Endpoints must deploy Sysmon with Event ID 1 (Process Creation) and Event ID 3 (Network Connection) enabled.
3. Adversary Emulation: Atomic Red Team must be executed in a dedicated, isolated sandbox environment. It is never permitted in production.
4. Retention Policy: Raw endpoint telemetry is retained for 90 days in hot storage before being archived.
